XMT*-918T series intellgence digital temperature control instrument

Insruction Manual

I \ Survey:

XMT*-918T series intellectual ability temperature regulator series controlled by single chip, free input multi-signals of thermocouple, ON/OFF control and PID control, besides, it has time function, you can adjust time unit hour and minute or minute and second .they are widely used in the automatic control system of the temperature, chemical, ceramics, light, metal, petrochemical and heat treatment industry.

 \bullet Basic deviation: $\pm 0.5\%$ F.S ± 1

• Cold end compensating deviation: $\leq \pm 2.0^{\circ}$ C

◆ Sampling cycle: 0.5s◆ time range: 15~59.59H

♦ time precision: class 0.005

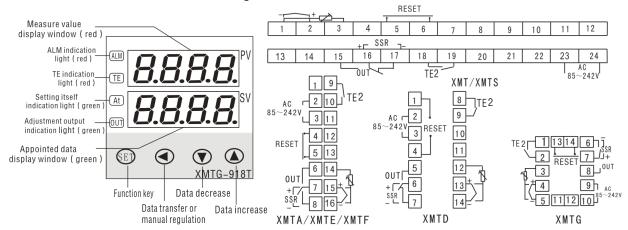

• Control cycle: relay output $2\sim120$ s and can be adjusted

◆ Relay output contact capacity: AC220V/3A (resistance load)

◆ Power: AC85V~242V (switching supply), 50/60Hz, or the other special request.

♦ Working condition: temperature $0\sim50.0^{\circ}$ C, relative humidity≤85% RH, without corrode and strong electric radiation.

III. Panel and connection scheme description (consult)

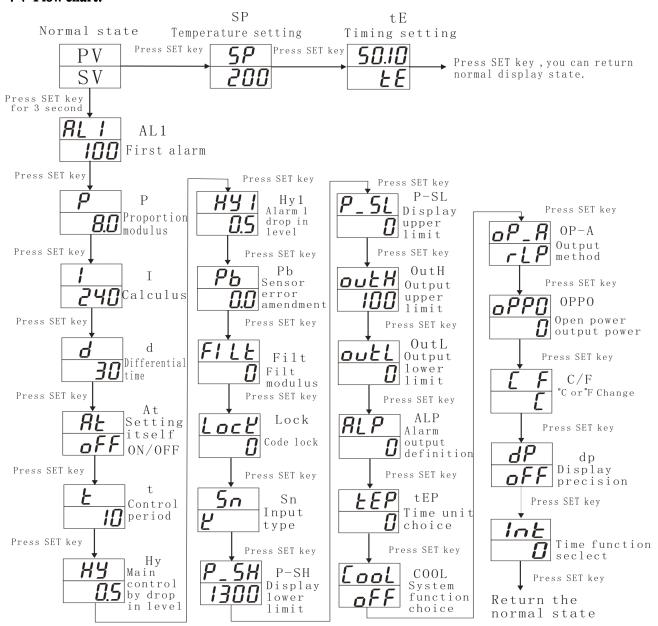

IV. Parameter code

1 at anieter couc										
Series	Code	Name	Setting range	Manual	Remarks					
0	58	Appointed data	Determined by P-SL P-SH	_	50.0					
1	ŁE	Timing seting	1~59.59	Connect the RESET terminal, when Temperature got the setting value, the meter start timing, the terminal TE2 connect and give an alarm(you can install buzzer in meter)						
2	AL I	Temperature upper limit alarm	Determined by P-SL,P-SH, When the upper and lower limit range,it is 0.0~100.0.	Temperature upper limit alarm	10					
3	P	Proportion modulus	0.0~200.0	When the $P\uparrow$, the proportion function \downarrow . When $P=0$, the meter is ON/OFF control	8.0					
4	1	Calculus time	0~3000S	Set the calculus time can relieve the steady-state error which	240					
5	d	differential time	0∼200S		30					
6	RE	Setting itself	oFF: close the function	Selection of the Setting itself function	oFF

				3: regular temperature control (no		
				alarm) +time relay function:		
				start timing when the power is on,		
				alarm relay attracting after reaching		
				the time .		

V . Flow chart:

VI: operation instrument

1. The first setting area

Press the SET key 3S enter into the first setting area, the meter will display the parameter code $2 \sim 25$ in the

window at the upper row and display the parameter data at the low row. In this time press the \blacktriangle . \blacktriangledown or \blacktriangleleft key to adjust the parameter, then press the SET key to preserve. Press the SET key long time will withdraw or press the SET $+ \blacktriangleleft$ key will directly withdraw. If within 10 seconds do not press every key then it will automatically to preserve the data and withdraw the setting.

The parameter 12 is LOCK, all the parameter can be modified when it is 0, or it can't. The user couldn't set the parameter larger than 50, or it will return to factory to test

2. The second setting area

When the meter is set up with the electricity, press the ▲ key about 3S enter into the second setting area, you can according the 1 to set the "SP" and "TE".

3, timing function:

When connect the reset terminal,, the meter starting timing, it get to the timing time, the relay of TE2 connect.

VII. setting itself

When the meter first be used, or the condition changes, the control performance will turn bad. In this condition, the parameter such as P_x I_x D, should be set, the method as below:

After setting the desired value, set (HY) $0.5 \sim 1.0^{\circ}$ C, set "AT"ON, A-M start glittering, the meter enter into the setting state, and the control method is ON/OFF; After three vibration, automatically save P_{N} Is D parameter, A-M light goes out, the setting process is over.

Note: ① If the power goes off when the meter is setting ,as the meter with memory function, it will restart setting next time.

②During setting, if the setting should be exit artificially, set "AT" OFF, then can exit, but if that, the setting result will be of no effect.

VIII. Meaning of the model code

XMT □—9		8	
1 2	3	4	5

1:The surface dimension (mm)

Blank:	$160\times80\times85$	Installation hole 156×76	A:	$96\times96\times80$	Installation hole 92×92
D:	$72 \times 72 \times 80$	Installation hole 68×68	E:	$48 \times 96 \times 75$	Installation hole 44×92
F:	$96\times48\times75$	Installation hole 92×44	G:	$48\times48\times110$	Installation hole 44×44
S:	$80\times160\times85$	Installation hole 76×156			

2: Operation display method: '9' 4-key gentle push-switch setting, double row 4-LED digital display, PID and ON/OFF (P=0) control can select.

3:Additional alarm: '1' No over-temperature alarm, but a group of time control output;

- '3' A group of alarm (upper limit alarm or follow-up alarm) and a group of time-control relay output;
- '5' No over-temperature alarm, but a group of time control output for buzzer alarm.
- 4: Input: '8' input signal can interchange free (no voltage and current input)
- **5: Suffix** Blank: relay output G: solid relay output T: Time control function

IX, Fault Analysis and Clearance

XMT*-918T series adopt advanced production process, and have the strict test before leaving factory, it improve the reliability of the meter .The usual fault caused by the wrong operation or parameter setting .If you find the fault couldn't be cope with, please record it, and contact with the agent or us. Sheet 9-1 is the usual fault of XMT*-918T series in the daily application:

Sheet 9-1 Common fault handling

fault symptom	analysis of causes	Disposal measurement		
Abnormal power	1, poor contact of power cord	Check the power		
	2. power switch without lose			

Signal display do not correlate	1. Sensor model mismatch	1, check sensor model and		
with the facts. (display'HH')	2, wrong signal connection	meter interior input parameter		
		2. check signal wire		
Abnormal output control	1, wrong connecting output wire	1, check output connection		

Attached 1: Statement of meter's parameter attention letter and English letter
